Proyecto No. 1 Analizador léxico

Desarrollo del programa en Java 21 y JFlex

A. Buenas prácticas de documentación y estilo de programación:

- El código está bien documentado con comentarios que explican su funcionalidad.
- Se sigue un estilo de programación limpio y organizado, con nombres de variables y métodos descriptivos.
- Se utiliza el estándar de codificación de Java (nombres en camelCase, sangrías consistentes, etc.).

B. Pruebas con un escenario de entrada:

- Se proporciona un archivo de entrada (html.txt) con código HTML para probar el programa.
- El programa genera una salida (salida.txt) con los tokens detectados, y los resultados también se muestran en una interfaz gráfica.

Código del programa Lexer.jflex

```
1  /* Lexer.jflex */
2  %%
3
4  %public
5  %class Lexer
6  %type Token
7  %line
8  %column
9
10 % {
11     public static class Token {
12         public String type;
13         public String value;
14         public int line;
15         public int column;
16
17         public Token(String type, String value, int line, int column) {
18             this.type = type;
19             this.value = value;
20             this.line = line + 1;
21             this.column = column;
22         }
23
24         @Override
25         public String toString() {
26             return String.format("Token[tipo=%s, valor='%s', linea=%d, columna=%d]",
27                 type, value, line, column);
28         }
29     }
30 }
31

Start coding with Codespaces
Add a README file and start coding in a secure, configurable, and dedicated development environment.
[Create a codespace](#)

Add collaborators to this repository
Search for people using their GitHub username or email address.
[Invite collaborators](#)

Quick setup — if you've done this kind of thing before

Set up in Desktop or HTTPS SSH

https://github.com/Cardonagt/AnalizadorLexicoHTML.git

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

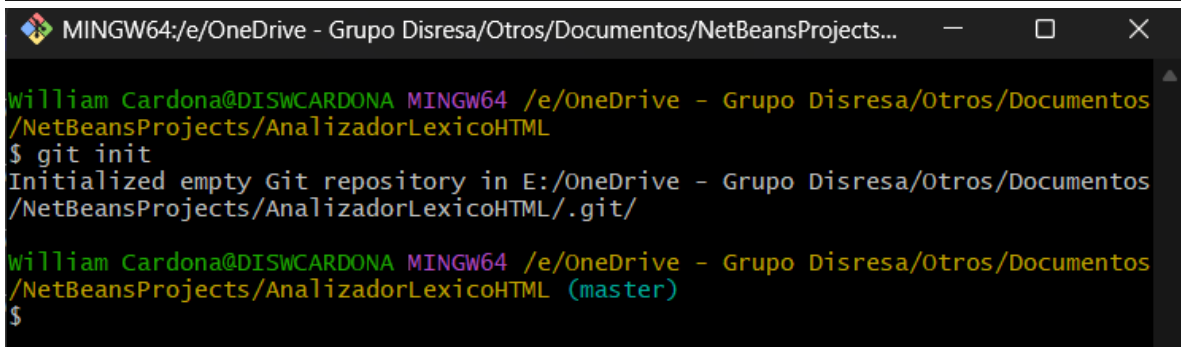

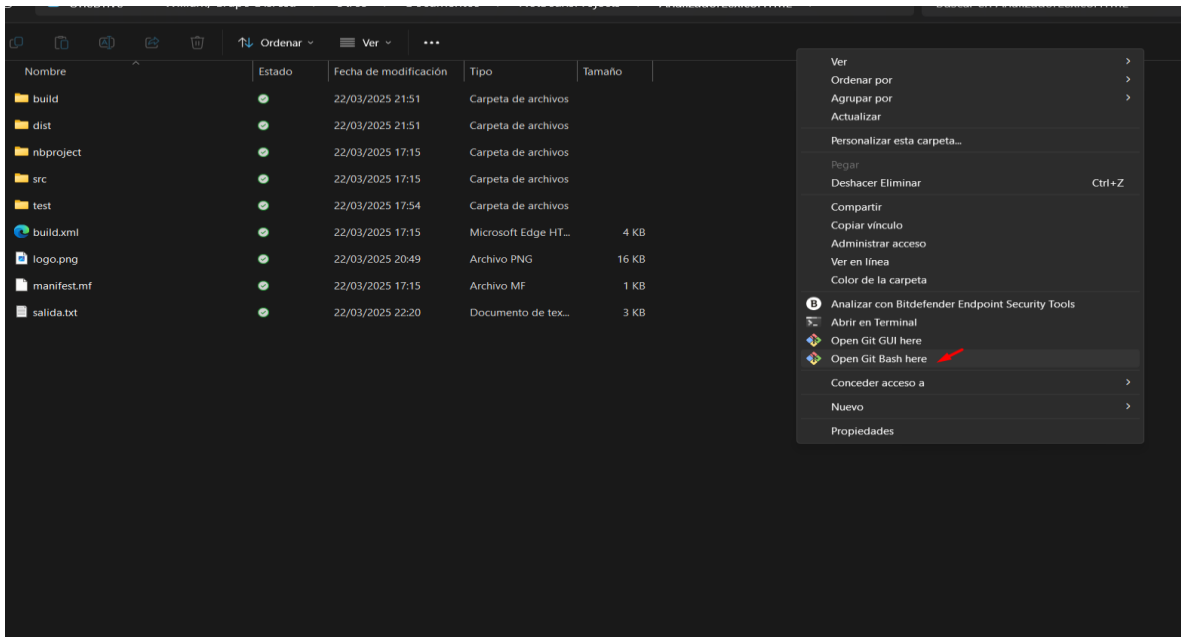

...or create a new repository on the command line

```
echo "# AnalizadorLexicoHTML" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/Cardonagt/AnalizadorLexicoHTML.git
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/Cardonagt/AnalizadorLexicoHTML.git
git branch -M main
git push -u origin main
```

Inicializar Git en tu proyecto local

Vincular tu repositorio local con el remoto

...or push an existing repository from the command line

```
git remote add origin https://github.com/Cardonagt/AnalizadorLexicoHTML.git  
git branch -M main
```

```
William Cardona@DISWCARDONA MINGW64 /e/OneDrive - Grupo Disresa/Otros/Documentos  
/NetBeansProjects/AnalizadorLexicoHTML (master)  
$ git remote add origin https://github.com/Cardonagt/AnalizadorLexicoHTML.git
```

Agrega todos los archivos al staging

```
William Cardona@DISWCARDONA MINGW64 /e/OneDrive - Grupo Disresa/Otros/Documentos  
/NetBeansProjects/AnalizadorLexicoHTML (master)  
$ git add .
